# Ikkoe programming test

Laurent Siksous

October 26, 2020

All tests have to be performed in Python 3. Use of Numpy & Pandas is allowed. You also may use language & API documentation, but not require any help of anyone. You should at all times regularly push onto a Git repository your coding attempts. You have one hour to complete the three exercises, until Thursday October 27th 2020

```
# import needed libraries
import numpy as np
import pandas as pd
```

## 1 Question 1:

Sum all the elements in a square matrix of 1000x1000 dimension.

```
# create a square matrix of 1000x1000 dimension with random elements
A = np.random.randint(10, size=(1000,1000))
# print the sum of all elements
print(np.sum(A))
4496460
```

## 2 Question 2:

You are given a data frame containing N lines and n columns. Columns i and j are qualitative and should be binary encoded by spawning categories into new columns bearing the labels and 0 or 1. Write the procedure for this one-hot encoding.

```
df = pd.read_csv("./cars.csv",sep=',',index_col=0)
df = pd.get_dummies(df, columns=['brand', 'color'])
df.info()
<class 'pandas.core.frame.DataFrame'>
Int64Index: 2499 entries, 0 to 2498
Data columns (total 87 columns):

## 3 Question 3:

Find an algorithm for determining whether subsets of connected directed vertices (i.e. edges), will spawn a circular graph.

• First, let's implement a Graph class as proposed in [?] Park, J., Basic Graph Algorithms, , (), 38 ().

#### class Graph():

```
# Defining two arrays : E of size m and LE of size n
def __init__(self, i):
    self.E = pd.DataFrame(columns=['to', 'nextID'])
    self.LE = [-1] * i

# Inserting a new edge from u to v with ID k
def insert(self, u, v):
    k = len(self.E) + 1
    self.E.loc[k] = {'to': v ,'nextID': self.LE[u-1]}
    self.LE[u-1] = k
```

```
def adjacencyMatrix(self):
        return self.E
    def adjacencyList(self):
        return self.LE
    def lastID(self, u):
        return self.LE[u]
    def nextID(self, ID):
        return self.E.nextID
   • Now, let's intentiate and poupulate a new graph of 5 nodes:
g = Graph(5)
g.insert(1, 2)
g.insert(1, 3)
g.insert(1, 5)
g.insert(2, 3)
g.insert(2, 5)
g.insert(3, 2)
g.insert(4, 2)
g.insert(4, 3)
g.adjacencyMatrix()
  to nextID
1 2
         -1
2 3
          1
3 5
          2
4 3
         -1
5 5
        4
6 2
         -1
7 2
         -1
          7
8 3
```

 $3 \quad 5 \quad 6 \quad 8 \quad -1$ 

g.adjacencyList()

• Implementing a Depth-Firt Search (DFS) algorithm to discover all the paths reachable from each node and discover if one or more is cyclic.
